

Start with the job. Earn the install.

Use this page to decide whether a workflow should enter a bounded pilot, discovery, repair, hold or human-led disposition. It is not a maturity score.

Workflow / team _____ _____	Business owner _____ _____	Employee users _____ _____	Review date / decision forum _____ _____
--	---	---	---

1 • JOB SIGNAL
What work is happening? What repeated friction or consequence makes change worthwhile? What should remain unchanged?

2 • CONTEXT + DATA
Which sources support the work? Who owns them? What freshness, permissions, definitions and failure modes matter?

3 • AI ROLE
Should AI retrieve, summarize, classify, draft, recommend or act? What is explicitly out of bounds?

4 • HUMAN AUTHORITY
Who approves, overrides, escalates and supports? What happens when evidence is weak or the system fails?

5 • PROOF + REUSE
Which workflow, quality, reliance, adoption, confidence, access and economic evidence will drive the next decision?

ENABLEMENT + CHANGE BURDEN
What must employees and managers do differently? What practice, support, communication and career pathway are required?

DISPOSITION

COMMISSION Bounded pilot with named owner, authority and evidence.	DISCOVER / REPAIR Value may exist; resolve context, design, control or adoption gaps.	HOLD Readiness or evidence is insufficient for responsible pilot work.	HUMAN-LED / STOP AI does not improve this work enough to justify the change burden.
